ALUTION: This is a system which distributes advertisement to a server an advertisement publishing site from a management server and when a customer accesses the server at a commercial site according to link information of advertisement at the advertisement publishing site through a communication terminal and takes an action including a purchase of an article, customer act information is sent to the management server, which stores the customer act information as an actual customer act result. Then the advertisement publishing charge to be paid to the advertisement publishing site is calculated according to the actual customer act result of the customer that the advertisement publishing site links and points for profit returning to the customer are given to the customer according to the actual customer act result.

AIMS

aim(s)]

aim 1] The server of one or more commercial sites which carry an advertiser's page respectively, and the server of
or more advertising printing sites which carry to a page the advertisement linked to the server of the above-
mentioned commercial site, Through a network, the management server which performs distribution and management
the above-mentioned advertisement interconnects, and is constituted. It is network advertising distribution
management / point reduction system which distributes an advertisement to the server of an advertising printing site
in the above-mentioned management server. When a customer performs the action which accesses the server of a
commercial site according to the link information of the advertisement of the above-mentioned advertising printing site
ough the communication terminal, and includes goods purchase, the customer action information to the above-
mentioned management server Delivery, While calculating the charge of advertising printing paid to that advertising
printing site according to a customer's customer action track record which accumulated this customer action information
a customer action track record in the above-mentioned management server, and the advertising printing site made
c Network advertising distribution management / point reduction system which gave the point for the profits
uction to a customer according to the customer action track record to the customer.

aim 2] Network advertising distribution management / point reduction system according to claim 1 which attached
display which shows a customer that it is the point reduction system which gives the point to the advertisement
ried to the server of each above-mentioned advertising printing site.

aim 3] Network advertising distribution management / point reduction system according to claim 1 or 2 by which
f also sets up the customer reduction conditions of returning profits to a customer according to the customer action
ck record, and the above-mentioned advertising printing site gave [the advertising printing site] the point of
stomer reduction profits to the customer who went via the above-mentioned advertising printing site according to the
ove-mentioned customer reduction conditions.

aim 4] The conditions according to each commercial site of profits including the above-mentioned point given to the
ion in a customer's commercial site are registered into the above-mentioned management server as a customer
dition database. When the retrieval system which the retrieval claimant prepared in the management server is
essed and a retrieval demand is carried out Network advertising distribution management / point reduction system
ording to claim 1, 2, or 3 which searches the above-mentioned customer condition database based on the retrieval
ditions which the customer specified by the above-mentioned retrieval system, and returned the retrieval result to the
rieval claimant.

aim 5] The conditions according to each commercial site of the profits which a commercial site gives to an
vertising printing site to a customer's purchase track record are registered into the above-mentioned management
ver as an advertising printing condition database. When an advertising printing site accesses the retrieval system
pared in the management server and a retrieval demand is carried out Network advertising distribution management /
int reduction system according to claim 1, 2, or 3 which searches the above-mentioned advertising printing condition
atabase by the above-mentioned retrieval system, and returned the retrieval result to the above-mentioned advertising
nting site.

aim 6] The server of one or more commercial sites which carry an advertiser's page respectively, and the server of
e or more advertising printing sites which carry to a page the advertisement linked to the server of the above-
mentioned commercial site, Through a network, the management server which performs distribution and management
the above-mentioned advertisement interconnects, and is constituted. It is the above-mentioned management server in
etwork advertising distribution management / point reduction system which distributes an advertisement to the server
the above-mentioned advertising printing site from the above-mentioned management server. A means by which a
stomer receives customer action information including goods purchase in the commercial site accessed according to

tp://www4.ipdl.jpo.go.jp/cgi-bin/tran_web_cgi_ejje?u=http%3A%2F%2Fwww4.ipdl.jpo.go.jp%2FTokuji... 8/9/2004

link information of the advertisement of the above-mentioned advertising printing site through the communication terminal from the server of the above-mentioned commercial site through a network, A customer action database means to accumulate the customer action information which carried out [above-mentioned] reception as a customer action track record, A calculation means to calculate the charge of advertising printing paid to the advertising printing site according to a customer's customer action track record which the advertising printing site made link, The management server of network advertising distribution management / point reduction system equipped with the point management system which manages the point for the profits reduction to the customer who gives according to the customer action track record to a customer.

claim 7] The management server of network advertising distribution management / point reduction system according to claim 6 which attached the display which shows that it is the point reduction system which gives a customer the point of the advertisement distributed to the server of each above-mentioned advertising printing site.

claim 8] The management server of the network advertising distribution management / point reduction system according to claim 6 or 7 had further a means set up and save the customer reduction conditions return profits to the customer whom the advertising printing site itself sets up according to the customer action track record, according to the profit from an advertising printing site, and a means give to the customer the above-mentioned advertising printing site of the above-mentioned advertising printing site in the point of customer reduction profits according to the above-mentioned customer reduction conditions.

claim 9] A customer condition database means to register into the above-mentioned management server the conditions according to each commercial site of profits including the above-mentioned point given to the action in a customer's commercial site, The retrieval system which searches the above-mentioned customer condition database based on the retrieval conditions which the customer specified, When a retrieval claimant accesses the above-mentioned retrieval system and a retrieval demand is carried out The management server of network advertising distribution management / point reduction system according to claim 6, 7, or 8 which searches the above-mentioned customer condition database based on the above-mentioned retrieval conditions by the above-mentioned retrieval system, and returned the retrieval result to the above-mentioned retrieval claimant.

claim 10] The advertising printing condition database which registers into the above-mentioned management server the conditions according to each commercial site of the profits which a commercial site gives to an advertising printing site according to a customer's purchase track record, It has the retrieval system which searches the above-mentioned advertising printing condition database. The above-mentioned retrieval system When an advertising printing site accesses and a retrieval demand is carried out The management server of network advertising distribution management / point reduction system according to claim 6, 7, 8, or 9 which searches the above-mentioned advertising printing condition database by the above-mentioned retrieval system, and returned the retrieval result to the above-mentioned advertising printing site.

claim 11] The server of one or more commercial sites which carry an advertiser's page respectively, and the server of one or more advertising printing sites which carry to a page the advertisement linked to the server of the above-mentioned commercial site, Through a network, the management server which performs distribution and management of the above-mentioned advertisement interconnects, and is constituted. as server ** of the above-mentioned commercial site in network advertising distribution management / point reduction system which distributes an advertisement to the server of the above-mentioned advertising printing site from the above-mentioned management server A customer the communication terminal The server of the commercial site of network advertising distribution management / point reduction system equipped with a means to transmit customer action information including goods purchase in the commercial site which it led and was accessed according to the link information of the advertisement of the above-mentioned advertising printing site to the above-mentioned management server through a network.

claim 12] The server of one or more commercial sites which carry an advertiser's page respectively, and the server of one or more advertising printing sites which carry to a page the advertisement linked to the server of the above-mentioned commercial site, Through a network, the management server which performs distribution and management of the above-mentioned advertisement interconnects, and is constituted. The computer of the above-mentioned management server of network advertising distribution management / point reduction system which distributes an advertisement to the above-mentioned advertising printing site from the above-mentioned management server A means which a customer receives customer action information including goods purchase in the commercial site accessed according to the link information of the advertisement of the above-mentioned advertising printing site through the communication terminal from the server of the above-mentioned commercial site through a network, A customer action database means to accumulate the customer action information which carried out [above-mentioned] reception as a customer action track record, A calculation means to calculate the charge of advertising printing paid to the advertising

ating site according to a customer's customer action track record which the advertising printing site made link, the management tool which manages the point for the profits reduction to the customer who gives according to the customer action track record to a customer -- ** -- the record medium which carried out and recorded the program for making it function and in which computer read is possible.

claim 13] The record medium which recorded further the program for making it function on the advertisement which distributes the computer of the above-mentioned management server to the server of each above-mentioned advertising printing site as a means to attach and distribute the display which shows that it is the point reduction system which gives point to a customer and in which computer read according to claim 12 is possible.

claim 14] A means to set up and save the customer reduction conditions of returning profits to the customer to whom advertising printing site itself sets the computer of the above-mentioned management server according to the customer action track record, according to access from an advertising printing site, a means to give the customer to whom the above-mentioned advertising printing site went the point of customer reduction profits via the above-mentioned advertising printing site according to the above-mentioned customer reduction conditions -- ** -- the record medium which carried out and recorded the program for making it function further and in which computer read according to claim 12 or 13 is possible.

claim 15] A customer condition database means to register into the above-mentioned management server the conditions according to each commercial site of profits including the above-mentioned point which gives the computer of the above-mentioned management server to the action in a customer's commercial site, It is a retrieval means to search the above-mentioned customer condition database based on the retrieval conditions which the customer specified. That will search the above-mentioned customer condition database based on the above-mentioned retrieval conditions in the above-mentioned retrieval system, and will return the retrieval result to the above-mentioned retrieval claimant if the retrieval claimant accesses and a retrieval demand is carried out, The record medium which carried out and recorded the program for making it function further and in which computer read according to claim 12, 13, or 14 is possible.

claim 16] The advertising printing condition database which registers into the above-mentioned management server the conditions according to each commercial site of profits where a commercial site gives the computer of the above-mentioned management server to an advertising printing site to a customer's purchase track record, When it is the retrieval system which searches the above-mentioned advertising printing condition database, an advertising printing site accesses and a retrieval demand is carried out what searches the above-mentioned advertising printing condition database by the above-mentioned retrieval system, and returns the retrieval result to the above-mentioned advertising printing site -- ** -- the record medium which carried out and recorded the program for making it function further and in which computer read according to claim 12, 13, 14, or 15 is possible.

FAILED DESCRIPTION

tailed Description of the Invention]

01]

ld of the Invention] This invention relates to network advertising distribution management / point reduction system
 ch unified the point reduction system and contingent fee mold advertising distribution managerial system which
 in relation nature strengthening with a customer in the on-line shopping using a network, and attained maximum-
 ion of the draw.

02]

scription of the Prior Art] As the technique of increasing access to the commercial site on online, banner advertising
 arried to the various sites of the Internet, and the technique connected to a commercial site by the customer who
 essed the site clicking the banner advertising is increasing in recent years. Although the traffic to the commercial site
 his banner-advertising use is increasing rapidly in recent years, increase of the direction of the advertising costs
 ch a commercial site pays to it and coincidence is being enhanced similarly. Although this is because banner
 ertising of these many serves as a system by which payment of advertising costs is simply performed to a printing
 od irrespective of the existence of a goods selling result, recently, the question over the cost performance to the
 ial effectiveness of advertising costs has come out, and each advertiser is beginning to get interested in the
 ertising distribution system of low cost more.

03] As one of them, the advertising distribution system of a contingent fee mold attracts attention in recent years, and
 azon.com adopts this, it becomes famous suddenly and is usually called the affiliate program. That is, only when a
 tomer (user) looks at the banner advertising and actually buys goods, it is the system of paying the advertising costs
 ording to the sales performance. No sites called an affiliate need to be huge sites like Yahoo, and a small individual
 is sufficient as them. Possibility of persuading them into resulting even in purchase firmly since the individual site
 the fan of the proper rather is high. It is said that Amazon etc. has an affiliate site already exceeding tens of
 usands. If this advertising distribution system is used, compared with the usual banner advertising, it is thought that
 ts can be dropped from 1/3 by 1/5.

04] Although the complicatedness of managing this countless affiliate site to an independent commercial site was
 nted out as one trouble, the affiliate program vicarious execution service firm called Aggregator like LINKSHARE
 ears, it has gone those managements, such as exploitation of an affiliate site, and costs payment, by current instead
 the commercial site, and this kind of complicatedness is solved.

05] The point reduction program as a customer's own incentive program attracts attention by one side to the affiliate
 program considered to be one gestalt of the incentive to these kind media. Although this shifts on online, the mileage
 l point card system with which a customer gives a customer the point to the track record which purchased goods on
 network, it returns to a customer and an existing airline, an existing card issuer, etc. perform a certain profits
 ording to the point value It is the description to be point-ized still more finely -- for a customer not only to purchase
 ual goods, but the point is added only by clicking for example, an advertising banner.

06] However, this point reduction system has the field which does not function unless it is a commercial, very big
 e, such as not becoming an incentive to a customer in order that the point may not go up forever, if there are few
 ods items which will serve as a candidate for selling if it carries out by the commercial site independent. For this
 son, it can be made to target many participating customers because many commercial sites usually join service of the
 ployment vicarious execution firm of a point reduction system (it is also called a loyalty program) like FreeRide or
 ypoint.

07]

roblem(s) to be Solved by the Invention] The two above-mentioned systems, especially each vicarious execution

em have the effectiveness of surely increasing the traffic to a commercial site. however, since each system is made of the incentive to a separate participant called media and a customer from beginning to end, its each is mutual -- it is staged, without completely inducing the synergistic effect.

08] For example, when the customer who has participated in the point program is usually netsurfing, he is not necessarily conscious of the point program. Unless it goes to a commercial site via the point reduction site which the various execution firm is managing, it is the structure which cannot usually receive the service. Now, the thing with weak force of making a customer starting impulse buying which makes point acquisition one motivation at the time netsurfing is clear.

09] On the contrary, when an affiliate site is visited, a customer is completely unrelated to the incentive which ally won over the next door and the customer to the site of an affiliate as it was only by purchasing the goods of a commercial site through the site simply. Now, it becomes the structure where it is only that an affiliate site profits by what he bought, and the customer who once got to know this structure already has a possibility of stopping purchasing 2 times and the site of those.

10] This invention is made in view of the above-mentioned trouble, reduces an advertiser's advertising costs burdens on-line shopping based on the idea of unifying the advertising distribution system and point reduction system of a contingent fee mold, and aims at maximum-izing the draw to coincidence.

11] means for Solving the Problem and its Function] In order to solve an above-mentioned technical problem, network advertising distribution management / point reduction system concerning this invention The server of one or more commercial sites which carry an advertiser's page (page with hyperlinks, such as a Web page) respectively, The server one or more advertising printing sites which carry the advertisement linked to the server of the above-mentioned commercial site to a page (page with hyperlinks, such as a Web page), Through a network, the management server which performs distribution and management of the above-mentioned advertisement interconnects, and is constituted. It network advertising distribution management / point reduction system which distributes an advertisement to the server of an advertising printing site from the above-mentioned management server. When a customer performs the action which accesses the server of a commercial site according to the link information of the advertisement of the above-mentioned advertising printing site through the communication terminal, and includes goods purchase, the customer action information to the above-mentioned management server Delivery, While calculating the charge of advertising printing paid to that advertising printing site according to a customer's customer action track record which accumulated this customer action information as a customer action track record in the above-mentioned management server, and the advertising printing site made link It constitutes so that the point for the profits reduction to a customer may be given according to the customer action track record to a customer. In this system, since profits reduction can be formed by giving the point to that customer action track record to the customer who visited the commercial site and actions, such as goods purchase, and the draw can be increased and the advertiser of a commercial site should just pay a countervalue to customer action track records, such as a customer's purchase, to an advertising printing site, that advertising costs burden is substantially reducible. Thereby, maximum-ization of the amount of traffic in the low cost to a commercial site on online is realizable by the synergistic effect of a contingent fee mold advertising distribution system and both the systems of a point system.

12] moreover, in above-mentioned network advertising distribution management / point reduction system An advertising printing site sets up the customer reduction conditions that self also returns profits to a customer according to the customer action track record. It is desirable in the above-mentioned advertising printing site constituting the point for example, a part of charge of advertising printing which the advertising printing site receives being assigned as the point (part of customer reduction profits) of customer reduction profits according to the above-mentioned customer reduction conditions, so that it may give to the customer who went via the above-mentioned advertising printing site. Thus, with constituting, an advertising printing site can also divide and give the customer a part of charge of advertising printing retained to advertising printing, attains related strengthening with the advertising printing site and customer by this, and can increase the motivation to which the same customer accesses the advertising printing site concerned again.

13] It is more desirable to attach the display which shows a customer that it is the point system which gives the point to the above-mentioned network advertising distribution management / point reduction system to the advertisement carried to the server of each above-mentioned advertising printing site. Thereby, a customer can know certainly that the commercial site is a commercial site which has joined in this system by seeing the advertising display concerned, and it comes the strong motivation of using the commercial site of this system.

14] Moreover, the above-mentioned network advertising distribution management / point reduction system The conditions according to each commercial site of profits including the above-mentioned point given to the action in a

customer's commercial site are registered into the above-mentioned management server as a customer condition database. When the retrieval system which the retrieval claimant prepared in the management server is accessed and a retrieval demand is carried out, it is more desirable to constitute so that the above-mentioned customer condition database may be searched based on the retrieval conditions which the customer specified by the above-mentioned retrieval system and the retrieval result may be returned to a retrieval claimant. Thereby, the strong motivation to the on-line shopping which leads this system becomes possible to a customer.

15] Moreover, above-mentioned network advertising distribution management / point reduction system The conditions according to each commercial site of the profits which a commercial site gives to an advertising printing site and a customer's purchase track record are registered into the above-mentioned management server as an advertising printing condition database. When an advertising printing site accesses the retrieval system prepared in the management server and a retrieval demand is carried out, it is more desirable to constitute so that the above-mentioned advertising printing condition database may be searched by the above-mentioned retrieval system and the retrieval result may be returned to the above-mentioned advertising printing site. Thereby, the commercial site which recognizes the commercial site conjectured that contingent fee conditions and the draw are [an advertising printing site] high, and is related to a self-site by the synthetic judgment can be chosen.

16] Embodiment of the Invention] Hereafter, the gestalt of operation of this invention is explained to a detail with reference to drawing. Drawing 1 is drawing showing the whole network advertising distribution management / point reduction system configuration of the contingent fee mold as one example concerning this invention. If the outline of this network advertising distribution management / point reduction system is explained The vicarious execution firm which executes proxy advertising distribution and employment of management of banner advertising which led the Internet The contract about the employment vicarious execution of a commercial site (1 or more) and advertising distribution management which performs sale of goods etc. through the Internet (or network using TCP/IP) An epilogue, The affiliate site (large number) which carries banner advertising of those commercial sites is invited. When actually purchasing the goods which a customer accesses a commercial site through banner advertising of these affiliate sites, the commercial site offers It pays to the affiliate site to which the customer concerned went via the countervalue according to the purchase track record in the form of the charge of advertising printing, the point is given also to the customer who did the purchase concerned with this, and a certain profits are returned to the point size. A service vicarious execution firm can take over these management employment alone instead of a commercial site, and a customer can receive the profits reduction by the point size according to a purchase track record by joining the system (point reduction system) which this service vicarious execution firm employs, and becoming a member.

17] In drawing 1, 1 is a master server system which achieves the central function of this network advertising distribution management / point reduction system, and 2 is a commercial site connected with this master server system 1 through communication lines (TCP/IP network), such as the Internet 5. This commercial site 2 is equipped with the commercial site WWW server 21 which can carry the Web page which performs goods sale of its company on online. The master client program 22, the browser, etc. were carried, by this master client program 22, a customer's page providing trucking information, purchase information, etc. were led to the master server system 1, it led the Internet 5 to at any time, and this commercial site WWW server 21 has transmitted.

18] 3 is a personal computer as a customer's communication terminal, and carries the web browser for perusing a web (WWW) page through the Internet. In addition, in the following explanation, this customer's personal computer is simply called a customer 3.

19] 4 is an affiliate site, is equipped with the WWW server which can carry a Web page [hyperlink (that where reference pointer) to other documents is embedded), and has carried the advertising banner linked to the commercial site on the Web page. The display, for example, the logo mark of a firm etc., to show that it is the system which a service vicarious execution firm employs is attached to this banner advertising (for example, alphabetic characters, such as A-N), by this display, the advertiser slack commercial site of the banner advertising concerned is the member's store of the service vicarious execution firm operations system concerned, and a customer can recognize that the point can be gained in doing some shopping there.

20] The customer 3 who accessed the affiliate site 4 which carries this banner advertising can access the commercial site WWW server 21 of the commercial site 2 linked to it via the Internet by clicking that advertising banner to use the commercial site 2 of that banner advertising. Moreover, the portal site 150 for point reduction systems (it is called the portal site) which a service vicarious execution firm employs is established in the master server system 1, and a customer 3 can also access the commercial site WWW server 21 by this Royal site 150 course.

21] The master server system 1 performs management of a customer 3 and the affiliate site 4. As mentioned above, a

customer 3 is the Royal site 150 course which affiliate site 4 course or a service vicarious execution firm employs, and accesses the commercial site WWW server 21 of the commercial site 2. The master client program 22 of the commercial site WWW server 21 of a commercial site has transmitted a customer's 3 page moving trucking information, purchase information, etc. to the master server program 101 by the side of the master server system 1 through the Internet (or P/IP network) at any time.

[22] The master server system 1 carries the master server program 101. This master server program 101 cooperates with the master client program 22 of the commercial site WWW server 21, has received a customer's 3 page moving trucking information, purchase information, etc. at any time, cooperates with various manager systems, a server system, etc. in the master server system 1 based on such information, and performs managements (an addition, deletion, modification, processing, etc.) of the data of various databases etc.

[23] Here, as a manager system, there are a point manager 106 for mainly managing registration of a customer, a point addition, point use, etc. to a point reduction system and an affiliate manager 114 for mainly performing management about affiliate sites, such as transfer of registration of an affiliate site, calculation of the contingent fee amount of money, report generation, and the contingent fee amount of money to the specified account. Moreover, these manager systems have also realized the conditioning input and managerial system of an incentive to the customer and affiliate which are set up by the commercial site side.

[24] Moreover, AD server system 112 is formed in this master server system 1, and this AD server system 112 carries a server program 115. To each affiliate site used as the member's store of a service vicarious execution firm operations system, based on the assignment conditions specified by the request demand of the advertiser slack commercial site 2, and an affiliate site, this AD server system 112 chooses advertising contents and an affiliate site, and tributes that banner advertising etc. through the Internet.

[25] Moreover, the search engine 113 is formed in this master server system 1. This search engine 113 is what searches the commercial site which offers the incentive of good conditions, and is put up for the good order of that addition etc. for a customer and an affiliate site. As opposed to the affiliate site 4 accessed through the Internet etc. The advertising printing conditions which an advertiser slack commercial site presents are searched (specifying retrieval conditions suitably, if required). Show the list about the advertising printing conditions according to each commercial site etc. in order of the good condition, or Or the customer 3 who similarly accessed through the Internet etc. is received. Based on retrieval conditions, such as goods wishing purchase specified by the customer, information, such as the selling price of each commercial site about them and preferential treatment conditions by the acquisition point or the affiliate site 4, is retrieved, and they are shown in order of a good condition.

[26] In addition, as preferential treatment conditions by this course affiliate site 4, affiliate site 4 self can set up now conditions which treat a customer favorably from that gained contingent fee amount of money by returning that part the customer side who went via the self-site, and the affiliate site 4 sets up preferential treatment conditions by own decision, and enables it to guide a customer to a self-site by that cause.

[27] As described above, the Royal site 150 is established in this master server system 1 as a portal site. Although it enables it to visit to the commercial site 2 because the customer who is the member in principle accesses this Royal site 150, as described above, when a customer 3 uses a search engine 113 to this Royal site 150, goods purchase conditions and POIN conditions can also search the commercial site 2 and the affiliate site 4 of good conditions.

[28] Moreover, the affiliate site 160 of service vicarious execution firm employment other than the above-mentioned Royal site 150 is established in this master server system 1 as a portal site. This affiliate site 160 is for the affiliate site 4 access, and the affiliate site 4 as a member's store accesses this affiliate site 160, in case the contingent fee conditions or banner-advertising printing search the commercial site of good conditions with a search engine 113, or in case it carries out registration etc. to the after-mentioned affiliate site AD distribution condition schedule DB116, it accesses commercial site information that advertising printing is expected of a self-site etc. Furthermore, the goods purchase conditions for a customer and point conditions which were mentioned above can also search the commercial site 2 of good conditions with using a search engine 113 to this affiliate site 160, and such retrieval information can be used as a decision ingredient at the time of the affiliate site 4 choosing as a self-site the commercial site 2 which carries out printing hope.

[29] Moreover, the point shop 170 is established in this master server system 1, this point shop 170 is a system for turning profits to a customer's 3 purchase track record, and the customer 3 can be made to do shopping on-line with it gained point.

[30] Various kinds of databases (it is called DB) are explained below. The customer Pasto racking DB102 is a database which manages the purchase information (and information on the action according to it) for the incentive calculation to path information (an affiliate course is also included) and a customer, and an affiliate site until it results in

customer's purchase (and action equivalent to it) etc. The item managed by this customer Pasto racking DB102 has managed a customer identification number, the access time, etc. which are given according to the IP address of the customer 3 with access in order to identify ReferrerURL (Uniform Resource Locator), the affiliate identification number, the affiliate site via which that customer went, and each customer that is the member, as shown in drawing 2.

[31] The customer profile DB103 is a database which manages each customer's profile, and as the item, as shown in drawing 3, it has managed a password, a name, the address, the telephone number, the facsimile number, the e-mail address, the admission registration day, etc. according to a customer's 3 customer identification number.

[32] The customer point DB104 is a database for managing the point given to the customer who is the member of a vice vicarious execution firm operations system. As the item As shown in drawing 4, the total point size which it has each a customer's 3 customer identification number the acquisition day of the point, the acquisition approaches (for example, purchase etc.), the gained point size, a reduction day (day when the customer used the point), the reduction approach (for example, purchase at a point shop), and now is managed.

[33] In order to realize a point reduction system, the customer incentive conditions DB105 It is the database which manages what kind of the point is given to actions, such as a customer's purchase in each commercial site 2. The item shown in drawing 5, according to the commercial site identification number of the commercial site 2 An incentive identification number, The click point given to the customer having clicked the advertising banner itself, The flag etc. is managed the survey point given to the questionnaire which a commercial site carries out to the customer having answered, the purchase points given to the customer having purchased goods, such as what% etc. of a price, and during operation which shows during the service implementation middle etc. specially. Although these items can also set up reduction point to a customer and are not illustrating it in that case at the own burden of a commercial site in order that commercial site 2 self may heighten the draw to a self-site, although the point returned to a customer by individual coverage is set up in order that a service vicarious execution firm may heighten the draw of the operations system, they finally establish the same item as the above for the commercial site 2.

[34] The affiliate transaction DB107 It is the database which manages the data about the settlement of accounts for calculating the contingent fee amount of money paid to the affiliate site 4 etc. as the item As shown in drawing 6, according to the affiliate identification number of the affiliate site 4 A commercial site identification number, a customer identification number, the contingent fee acquisition time that is time with the action of the customer leading to contingent fee acquisition, The amount of money of the success class which is the action of the customer leading to contingent fee acquisition, and the gained contingent fee, the name of article of the customer purchase goods leading to contingent fee acquisition, the existence of the cancellation flag which shows whether the customer canceled purchase goods behind, etc. are managed.

[35] The affiliate profile DB110 is a database which manages the profile of each affiliate site, and as the item, as shown in drawing 7, it has managed the account of the financial institution which becomes URL of the password which affiliate site sets up according to the affiliate identification number of the affiliate site 4, and the affiliate site concerned, a company name (an individual also contains), a name of representative, the address, the telephone number, facsimile number, and the transfer place of a contingent fee etc.

[36] The affiliate incentive conditions DB109 It is the database which manages on what kind of conditions each commercial site pays a contingent fee to the affiliate site via which it went to a customer's purchase action. The item As shown in drawing 8, according to the commercial site identification number of the commercial site 2 The identification number of an affiliate site, The click point which is the amount of money in the case of paying a contingent fee also to incentive identification number and a customer's click action, The survey point which is contingent fee gold paid to course affiliate site when a customer replies to a questionnaire etc., The purchase point which is contingent fee gold paid to the course affiliate site to a customer's goods purchase (what% etc. of a price), The flag, the customer point reduction participating flag which shows whether affiliate site 4 self has participated in the point reduction to a customer managed during the operation which shows during the service implementation middle etc. specially. In addition, about the click point, the survey point, and the purchase point, the point which affiliate site 4 self explained below turns to a customer by individual coverage (the part is assigned in this example from the remuneration amount of money which the affiliate site 4 receives) is shown by parenthesis writing.

[37] An affiliate site AD distribution condition and a schedule DB116 It is a database for the affiliate site 4 to set the items and conditions about the advertisement which wishes to carry as a self-site. This item The use commercial site identification number for specifying the commercial site which wishes advertising printing according to an affiliate identification number, as shown in drawing 11, As an item for customer reduction for affiliate site 4 self to give the point to the customer 3 who went via the self-site besides the advertising type of an incentive identification number, number advertising, a text, etc., and a printing period by individual coverage The flag etc. is managed during the

ration which shows that the click point, the survey point, the purchase point, and its customer reduction service are tied out.

38] The affiliate report archive DB108 It is the database which manages the data for drawing up the report which shows the gained contingent fee amount of money to a commercial site or an affiliate site. The item As shown in drawing the commercial site identification number exception of a commercial site, or according to the affiliate identification number of the affiliate site 4 A report number, the remuneration amount-of-money sum total which the affiliate site required, The transaction generating time which is the time which the action (here, it is called a transaction) leading to contingent fee acquisition produced, The transaction cancellation existence which shows whether the amount of money, such as names of articles, such as goods set as the object of the transaction, and goods of those, the generating site name which is the name of the commercial site which the transaction generated, and its transaction were canceled by later is named.

39] The affiliate AD material DB111 The commercial site 2 which is an advertiser is the database which manages data about the advertising contents, such as a location (affiliate site) which carries that advertisement, and a period, amount of money. This item As shown in drawing 10, according to the commercial site identification number for notifying an advertiser slack commercial site (advertising client) The distribution prohibition category which directs class (category) of an advertising type, a material location with an advertising material, and affiliate site that forbids advertising printing, The proper refusal site which directs individually the affiliate site which forbids advertising printing, the period wishing printing which is a period which wishes advertising printing, the contract remuneration amount of money paid to advertising printing, Target PV, etc. are managed.

40] Below, actuation of this advertising distribution and managerial system is explained. Drawing 12 and drawing 13 show the exchange of the data between the master client program 22 at the time of page migration of the customer 3 in commercial site 2, and the master server program 101. Here, a thing when a customer 3 accesses drawing 12 to the commercial site 2 by affiliate site 4 course, and drawing 13 are things when a customer accesses the commercial site 2 Royal site 150 course.

41] the Royal site 150 or affiliate site 4 course whose service vicarious execution firm employs a customer 3 -- it is -- is going to use -- although the commercial site WWW server 21 of a commercial site is accessed, in case it accesses, master server program 101 by the side of the master server system 1 is surely called first, fixed processing by the following master server program 101 is carried out, and it moves to the page of the purpose of the commercial site 2 automatically after that. In addition, URL of the master server system 1 is also embedded besides URL of the commercial site 2 at banner advertising carried to the affiliate site 4 for this purpose.

42] First, when it is the Royal site 150 course which a service vicarious execution firm employs, by making into information URL (HTTP using the function of the Referrer field which it originally has) of the customer discernment ID of the Royal site concerned, and a customer's IP address, the master server program 101 is passed and automatic transfer of the page is carried out to the commercial site 2 (step B1). In affiliate site 4 course, the information on URL HTTP uses the function of the Referrer field which it originally has) of the affiliate identification number which each affiliate site has, and the affiliate site concerned, and a customer's IP address is passed, and it carries out automatic transfer of the page to the commercial site 2 (step A1). The master server program 101 which received the above-mentioned information saves information at the customer Pasto racking DB102.

43] After this processing, although it will move to the page of the purpose of each commercial site 2, whenever a customer 3 moves each page in a commercial site, the master server program 101 is passed from the master client program 22 of the commercial site 2 after it, by making into information URL (HTTP using the function of the Referrer field which it originally has) of the commercial site concerned, and a customer's IP address (step A2 - A5, B-2 - B5). The master server program 101 which received the above-mentioned information saves information whenever [the] at customer Pasto racking DB102. When a customer 3 completes settlement of accounts, in addition to the above-mentioned information, the purchase information on goods is also transmitted.

44] Moreover, when settlement of accounts is completed, of the customer 3 who purchased by the affiliate site 4 course, for point management, the Royal site 150 is called again, the ID input screen is shown, and a customer identification number input is required (step A6). Under the present circumstances, since that customer may not be the member of a service vicarious execution firm operations system yet, while showing the Web page which stimulates mission in that case and acquiring that PUROAIRU information from a customer, a customer identification number is given. In addition, also in Royal site 150 course, same processing is carried out when the customer is not the member of service vicarious execution firm operations system yet.

45] In addition, to the commercial site which can apply the point to a part of purchase price, a use carbon button can be pushed at the clearing time, a customer identification number is required in that case, and after the customer 3 who is

member inputting this, the IP address of a customer identification number, the use point, ReferrerURL, and a tomer is sent to the master server program 101 as information, and is accumulated in the customer Pasto racking 102. In this case, processing whose affiliate site 4 course also calls the Royal site 150 is not performed.

46] Drawing 14 shows the whole outline about the delivery flow of the data inside the master server system 1, and wing 15 - drawing 25 show each data flow of those. Hereafter, this data flow is explained separately.

47] Drawing 15 shows the data flow which saves a customer's 3 path information and purchase information at the tomer Pasto racking DB102. That is, whenever such information occurs, whenever the master client program 22 of commercial site 2 receives this information to the master server program 101 of the master server system 1, it saves ivery and the master server program 101 at it at the customer Pasto racking DB102.

48] the member by whom, as for drawing 16, the customer 3 was registered for point management etc. -- the data w for checking whether you are him is shown. The customer 3 registers his profile information into the customer file DB103 through the Royal site 150 beforehand. And when a customer 3 accesses the commercial site 2, when that ess is affiliate site 4 course, I have a customer identification number and a password entered by above-mentioned TEFFU B1 at the time of the above-mentioned step A6 or Royal site 150 course, and this information is passed to the ster server program 101 from the master client program 22, and the point manager 106 is passed further. The point nager 106 is collating this information with the customer profile information currently kept by the customer profile :103, and judging whether it being the same, and it can check that he is him.

49] It is the data flow of ***** which judges whether the point of drawing 17 of the customer 3 is available when it is learing time point at the time of the customer 3 who visited the commercial site 2 doing goods purchase etc. and the tomer 3 wishes point use. A customer identification number is passed to the master server program 101 from the ster client program 22, and the point manager 106 is passed further. The point manager 106 makes this customer ntification number an index, collates with the customer point information on the customer point DB104, checks that al point size, and judges whether use of the point is possible.

50] Drawing 18 is the data flow for updating the contents of the customer point DB104, when a customer 3 performs pping in goods purchase and the point etc. When a customer 3 does goods purchase to the commercial site 2 or ers point use on that occasion, the information is told to the master server program 101 from the master client program 22. The master server program 101 computes addition and deletion of the point to the customer point DB104 ed on the data of the affiliate transaction DB107 or the customer Pasto racking DB102 (based also on the contents of affiliate site AD distribution condition schedule DB116, when there is point reduction to the customer by the iliate site 4), and updates the contents of the customer point DB104. In addition, generally it becomes [rather than] y to carry out count using the path information on raw [of the customer of the customer Pasto racking DB102] in way which used the data of the affiliate transaction DB107 etc. in this case. Such processing is similarly performed, en a customer does some shopping at the point shop 170 of service vicarious execution firm employment.

51] Drawing 19 is the data flow when registering the customer incentive conditions which are the profits given to the tomer who visited the commercial site 2. Although usually set up in a service vicarious execution firm, the customer entive conditions DB105 can also be set up also from the commercial site 2 side, and can enforce the setting roach via the Internet in that case using a browser. That is, the point manager 106 is accessed through the master ver program 101 from the browser of the commercial site 2, and the customer incentive conditions which the self-site the customer incentive conditions DB105 pays are rewritten.

52] Drawing 20 is the data flow when registering the affiliate incentive conditions which are the contingent fee paid the affiliate site where the commercial site 2 carries banner advertising of a self-site. The affiliate incentive conditions 3109 are set up by the commercial site 2 side, and can enforce the setting approach via the Internet using a browser. e affiliate manager 114 is accessed through the master server program 101 from the browser of the commercial site 2, d the affiliate incentive conditions about the self-site of the affiliate incentive conditions DB109 are rewritten.

53] Drawing 26 is the data flow when registering the affiliate site AD distribution condition and schedule about the vertising contents which the affiliate site 4 carries to a self-site. The affiliate site 4 can access the affiliate site 160 of vice vicarious execution firm employment, the exclusive WWW site of the affiliate site 4 which comes in the affiliate e 160 by the input of the affiliate identification number and a password can be accessed, and the affiliate site 4 can oose the affiliate program of the commercial site which actually participates in the site. Furthermore, the conditions of incentive prepared in the program of the commercial selected site can also be chosen, and conditions can be set up that a part of incentive may be diverted to some other purpose to the point returned to a customer in that case. The nditions set up here are accumulated as individual conditions for the affiliate site 4 into the affiliate site AD istribution condition schedule DB116.

54] Namely, the affiliate site 4 accesses the master server program 101 by affiliate site 160 course, and, as for

ivery and the affiliate manager 114, an addition, deletion, modification, etc. make the contents of the affiliate site AD distribution condition schedule DB116 the affiliate manager 114 for the data which received the master server program from the affiliate site 4 by the data. The contents of this affiliate site AD distribution condition schedule DB116 are passed to AD server system 112, and are used as information in case AD server system 112 chooses the affiliate 4 of an advertising distribution place while interlocking processing is carried out so that it may be reflected also in contents (part of parenthesis writing) of the affiliate incentive conditions DB109.

55] Drawing 21 is the data flow for judging whether the affiliate identification number received from the commercial site 2 is what is beforehand registered into the affiliate profile DB110. Beforehand, the affiliate site 4 accesses the affiliate site 160 of service vicarious execution firm employment, and registers the affiliate BUROFAIRU information self into the affiliate profile DB110. If a customer 3 visits the commercial site 2 by affiliate site 4 course, the master server program 101 will pass the affiliate identification number of that affiliate site 4 via which it went to reception from master client program 22, and will pass the affiliate manager 114 this affiliate identification number. The affiliate manager 114 judges whether it is the same as the affiliate identification number with which this affiliate identification number was registered into the affiliate profile DB110.

56] Drawing 22 is the data flow for performing processing which corrects the contingent fee paid to the affiliate site when the customer 3 who did goods purchase cancels the purchase goods after that. If the commercial site 2 receives notice of goods cancellation from a customer 3, the cancellation information will be passed to the master server program 101. The master server program 101 passes the affiliate manager 114 this cancellation information further. The affiliate manager 114 receives the cancellation information inputted from this commercial site 2 side, and performs processing for performing that correction to the affiliate transaction DB107 based on that cancellation information.

57] Drawing 23 is the data flow for drawing up the contingent fee amount-of-money report according to each commercial site to the affiliate site 4. If the master server program 101 carries out a creation request of a contingent fee amount-of-money report to the affiliate manager 114, the affiliate manager 114 will draw up the contingent fee amount-of-money report compiled according to each commercial site about each affiliate site based on the contents of data of affiliate transaction DB107 and the affiliate incentive conditions DB109 (a part for customer reduction of the affiliate site AD distribution condition schedule DB116 is included). Moreover, the contingent fee amount-of-money report compiled according to each affiliate site is drawn up about each commercial site. These report data are kept in the affiliate report archive DB108. Based on these reports, a bill is published in a commercial site in the phase which required acknowledgement of the corresponding commercial site. While sending the report which carries out this respectively to the affiliate site 4, transfer of the contingent fee amount of money is performed. These money processes may be performed on online, or other means may perform.

58] Drawing 24 is the data flow for performing processing which distributes banner advertising to an affiliate site according to the contents of a request from the commercial site 2. The commercial site 2 registers the class of affiliate which carries created banner advertising and it beforehand etc. into the affiliate AD material DB111. If there is a creating request of banner advertising from the commercial site 2, the master server program 101 will notify it to AD server system 112. AD server program 115 of AD server system 112 distributes advertising data via the Internet to those affiliate sites 4 so that banner advertising of each commercial site manufacture may be carried to the affiliate site 4 applicable to conditions with reference to the contents of the affiliate AD material DB111, and the contents of an affiliate site AD distribution condition and the schedule DB116.

59] Drawing 25 is the data flow when performing processing whose affiliate site 4 and customer 3 search affiliate incentive conditions and customer incentive conditions, respectively. The affiliate site 4 accesses a search engine 113 through the affiliate site 160 of service vicarious execution firm employment. If retrieval conditions are specified tably and retrieval of affiliate incentive conditions is requested The master server program 101 accesses the affiliate incentive conditions DB109 by affiliate manager 114 course. The affiliate incentive conditions applicable to retrieval conditions are searched, the retrieval result to which presentation etc. made the list about the advertising printing conditions according to each commercial site etc. the order of a good condition is created, and the retrieval result is returned to the affiliate site 4.

60] in addition, assignment of the retrieval conditions by the above-mentioned affiliate site 4 is shown in drawing 27 as -- the page of the affiliate site 160 -- for example, -- "-- if the commercial site of a **** affiliate program is looked ;, please use a search engine. Set up the following conditions freely. What is necessary is just to make a retrieval ribbon button click, as guidance of introducing the best program suitable for you" is put up and the type of a contingent acquisition action received as the goods genre which wants to treat the affiliate site 4, and this charge of advertising printing is made to input.

61] If similarly a customer 3 accesses a search engine 113 through the Royal site 150 of service vicarious execution

employment, specifies required retrieval conditions and requests retrieval of customer incentive conditions The master server program 101 discovers the customer incentive conditions which access and correspond to the customer incentive conditions DB105 by point manager 106 course. The customer creates the retrieval result to which advertisement etc. made information, such as the selling price of each commercial site about the goods which desire purchase, and preferential treatment conditions by the acquisition point or the course affiliate site, the order of a good position, and returns a customer 3 the retrieval result.

52] In addition, assignment of the retrieval conditions by the above-mentioned customer 3 is shown in drawing 28 -- the page of the Royal site 150 -- for example, -- "-- if the commercial site and affiliate site of a **** point system looked for, please use a search engine. Set up the following conditions freely. What is necessary is to put up balance of introducing the best program suitable for you", and just to make a retrieval carbon button click, as a customer 3 makes the type (point type) of the action performed for accumulating for which a goods genre with interest, such as purchase, and a customer receive point reduction input.

53] Moreover, retrieval of the same customer incentive conditions as the above can also perform that the affiliate site starts a search engine 113 via the affiliate site 160. It can judge which is the commercial site 2 to which the affiliate site 4 is popular for a customer 3 by this, and therefore, if the advertisement of which commercial site 2 is carried to a website, it can predict whether many contingent fee amount of money can be gained as the advertising rate, and can consider as the decision ingredient from which the commercial site which wishes to carry is chosen.

54] Although explained as that by which the control program for realizing the function of the master server system is beforehand stored in the master server system 1 of this invention in the above explanation This invention is recording control program for not being restricted to this use gestalt and operating the computer of a master server system as the function of the above-mentioned master server system on the record medium of the portable mold in which computer read's is possible. It is also possible for sale etc. to carry out this record medium itself in a commercial scene, the purchaser of this record medium is installing that control program in its own computer, and it is possible to add a part for the principal part of the system of this invention suitably. This point is the same also about the control program for realizing the function concerning this invention of the commercial site WWW server 21 of the commercial site 2.

65] In addition, although the above-mentioned example explained the system of this invention as what the service various execution firm which contracted the contract with the commercial site employs, of course, an independent commercial site is able not to restrict this invention to this and to manage the system of this invention uniquely. Moreover, although the point size was used in the above-mentioned example as profits returned to a customer, it may change to a point size and the thing of money and others may be returned.

66] [Effect of the Invention] Since the advertising distribution system and point reduction system of a contingent fee mold unified in this invention and it was made to apply as explained above The incentive which a customer uses as an access plug to a commercial site according to the use of point grant can be increased. The sales performance in a commercial site comes to go up by that cause, and since a bigger contingent fee amount of money can be received if it therefore sees from an advertising printing site side although it will be the high system of the draw therefore, more advertising printing sites come to expect affiliation of this system. This result, The number of advertising printing sites increases and a commercial site can heighten the draw more. As advertising costs burdens are substantially reducible so to increase of an advertising printing site, since the advertiser of a commercial site should pay the charge of advertising printing only to the action according to sales performance or it to it by the synergistic effect of both systems maximization of the amount of traffic in the low cost to the commercial site on online is realizable.

67] Thus, since a commercial site can mobilize a customer via the media site of low cost more, while it can be mainly connected to reduction of advertising costs, it can strengthen the loyalty to a customer further.

68] Moreover, by attaching the display which shows that it is this system with point grant to the advertisement tied to an advertising printing site, a customer can be certainly told about being the commercial site which has joined this system, and the strong motivation of using the commercial site of this system can be given.

69] Moreover, a customer is using a retrieval system, he can recognize a commercial site with more sufficient purchase conditions, and a course affiliate site, and the strong motivation to the on-line shopping which leads this system by this of him becomes possible.

70] Moreover, an advertising printing site is using a retrieval system similarly, can recognize a commercial site with more sufficient contingent fee conditions, and moreover, as a commercial site which can recognize the commercial site is conjectured that the draw is more high by searching a customer's purchase conditions, judges these synthetically, and is carried to a self-site Total contingent fee profits can choose a higher advertiser's commercial site, it also becomes the

ntive of advertizing also oneself the advertisement which this carries to a self-site, and even if it sees from a commercial site side as a result, the draw can be heightened more.

71] Moreover, by performing point reduction also from an advertising printing site to a customer, for a customer, a it size can gain now from usual mostly by going via the advertising printing site, and the charm which therefore goes the advertising printing site increases. Consequently, even if strengthening ties with the advertising printing site and omer is attained and it continues for the future, it is expectable that the probability which purchases the offer goods ne commercial site which the advertising printing site recommends becomes still higher.
